

Spencer Boucher

☎ (650) 946-7257 | ✉ spencer@spencerboucher.com

Curious and versatile data scientist with a decade of experience specializing in product optimization, experimentation, and analytics engineering. Passionate about translating complex findings into compelling product strategies and fostering cross-functional collaboration between product, data, and engineering to build products that matter to users.

Experience

Senior Product Data Scientist

Dec 2021 – Jun 2024

GAMETIME UNITED

Remote

- Developed data warehouse and visualization infrastructure for analyzing A/B tests in frequentist and Bayesian frameworks, enabling company-wide product experimentation
- Created data models using DBT to catalogue and standardize the most critical company metrics including user engagement, net revenue, funnel, conversion, and retention
- Defined product instrumentation specifications for every new feature that went into web and mobile clients, ensuring every possible outcome was measurable before it was needed
- Designed dashboards to allow product owners and executives to quickly self-serve insights about how users behave, identifying the most relevant analytical dimensions
- Identified changes to the most crucial step of the user funnel – the event page – to increase conversion and average order value by implementing a novel map interface
- Developed algorithmic methodology for mapping ticket quality to user-facing value scores, helping users more quickly identify the best deals

Senior Product Data Scientist

Jan 2019 – Jul 2020

INVISION

Remote

- Analyzed user flow patterns to optimize new user experience for converting various user outcomes, including retention
- Created data pipelines and detailed dashboards to track user satisfaction across several products and user stratifications
- Developed the next generation of product experimentation platform and used it to conduct experiments on user experience

Data Science Curriculum Lead

Sep 2017 – Sep 2018

DATA CAMP

New York, NY

- Planned and developed DataCamp's mobile data science curriculum
- Overhauled the platform's proprietary mobile authoring format and process
- Developed pedagogical guidelines for teaching data science on a mobile platform
- Identified key content quality metrics and built dashboards to track and improve them
- Contributed weekly podcast segments on important topics in data science

Data Scientist

Jan 2014 – Oct 2016

UBER

San Francisco, CA

- Optimized the dispatch radii of restaurants on the Uber Eats platform to minimize delivery time and maximize value
- Implemented crucial back-end features of Uber's internal machine learning platform, including performance reports and diagnostic dashboards for trained machine learning models
- Performed analysis and modeling that powered data-driven decision making and strategic expansion of operations in the United States and abroad
- Developed Bayesian models to infer ride-sharing market conditions in cities around the world
- Authored various ETL pipelines in Python and Hive to craft high-velocity, high-volume raw data into useful features for statistical modeling

Skills

Metrics & Analytics	Dashboarding Analytics engineering Data pipelining
Experimentation	Frequentist A/B testing Bayesian A/B testing
Modeling & ML	Regression Survival analysis Classification Time series Clustering
SQL	Snowflake Redshift PostgreSQL MySQL
Python	Pandas scikit-learn
Data Pipelining	DBT Airflow Fivetran Eppo
BI & Notebooks	Sigma Tableau Looker Mode Hex Deepnote Jupyter
CI/CD	Git GitHub Jenkins
Other	R (Tidyverse) JavaScript React.js

Education

Master of Science in Data Science

UNIVERSITY OF SAN FRANCISCO

May 2014

CA

Bachelor of Arts in Cognitive Science

RICE UNIVERSITY

May 2011

TX

Interests

Ski mountaineering | Nordic skiing | Trail running | Triathlon
